CYBER DEFENCE STAFF AUGMENTATION

Mossé Security offers Staff Augmentation Services to organisations providing cyber defence capabilities in areas they typically lacking or challenged. Our Certified Consultants work on site to discover the areas that are the most vulnerable and remediate them as swiftly as possible.

OVERVIEW

Our Mossé Security Security Consultants become integrated as one of your team in the capacity of providing expert insights and analysis across all areas of cyber defence.

We expertly help and assist your organisation with crucial security advice and bring their expert skills in areas such as patching to reduce vulnerabilities, writing malware detections, discovering how malware entered your network, and hardening your operating systems to ensure maximum security.

MOSSÉ SECURITY

- **Cyber Defence:** Hardening and protecting networks against the most common attack vectors.
- **Threat Hunting:** Identifying anomolies on the network that enterprise security products have failed to catch.
- **Malware Analysis:** Reverse engineering malware samples to identify new attack techniques and understanding adversary capabilities.
- **Threat Intelligence:** Discovering and tracking ongoing attack campaigns and providing actionable advice to teams in charge of defending the network.
- **Windows Hardening:** Securing Windows system by reducing surface vulnerabilities.
- **Digital Forensics:** Investigating and recovering compromised machines and networks.
