

# SOCIAL ENGINEERING

Mossé Security's Social Engineering services test employee knowledge on current cyber threats in organisations as well as any business impact these threats can cause. Contact us today to begin this comprehensive security service.

## OVERVIEW

Mossé Security offers important Social Engineering services to organisations as a method of testing employees' knowledge of current cybersecurity threats. Employees often do not realise their own role or even the extent of the impact these threats can have on a business. Malicious threat actors commonly target employees in the initial stages of their attack process, using different tactics and techniques to trick employees into compromising information.

Our experienced Certified Consultants implement the same tactics a real attacker would use by researching open-source information on your company and employees. This method is used to provide a highly augmented chance of success throughout the engagement. We work closely with your organisation to plan the most useful scenarios to test your employees thus gaining a comprehensive understanding of how successful a real attacker could be.

Mossé Security provides you with a comprehensively detailed report of our results, outlining recommendations on how to improve employee cybersecurity knowledge.

## MOSSÉ SECURITY

- **Open Source Intelligence:** Mossé Security uses open source intelligence to build a case, zeroing-in on the key points of weakness in your organization, and how to exploit it. We take a look at who the key employees are and all the public information we can find in-order to increase the chance of a successful attack.
- **Spear-Phishing:** Mossé Security Certified Consultants conduct realistic spear-phishing campaigns targeting employees within the organisation. We manually create specific emails, the same way a real attacker would, to maximise the chances of deceiving employees into handing over sensitive information for a successful attack.
- **Comprehensive Reporting:** Mossé Security provides a full report detailing all the findings, including any sensitive information our Certified Consultants were able to access through the social engineering campaign. We highlight the risks and provide recommendations for an enhanced level of cyber defense.

## BENEFITS:

### Expertise:

Mossé Security conducts hundreds of social engineering campaigns the same techniques threat actors are currently using against organisations with similar target profiles.

### Cybersecurity Knowledge:

Mossé Security discovers what areas in your organisation are exploitable by current threats from a social engineering standpoint

### Risk Mitigation:

Mossé Security identifies all of the vulnerabilities publicly available through open-source intelligence and the risks this information poses to the business, highlighting any potential cyber risks
